

The Molecube: the essence of design

For the 2017 season the Molecube of the Derapage optical glasses collection represent the essence of modern design.

The patented Molecube hinge remains at the forefront of innovation and characterizes a collection that offers new frames and structure design.

The new series of glasses are ultra essential; a lense suspended from a highly technical, thin upper frame in brushed metal. This innovative anchoring system was pioneered by the Derapage design team, rendering the attachment of the lenses to the frame completely invisible.

The opaque finishes and the simple understated tones underline the technical, aesthetic and mainly masculine design of the glasses. Shape and size are unexaggerated creating the perfect balance between ultra light minimalist design and meticulous personal style.

The Derapage Molecube

Derapage introduces a new range of Molecube glasses. Patented and Made in Italy our Molecube hinge is an arrestingly simple concept made possible by cutting edge technical know-how and execution.

The Molecube hinge is created by minute strata of triple-ply metal secured by a square linchpin that is attached to the front frame but remains hidden within the temple. Holding the glasses the user can “click” out the temples of the glasses as well as “click” them in; unprecedented technology in the world of eyewear that offers total comfort and reliability. One tiny flexible device that eliminates the need for adjustment or the all too common risk of screws becoming loose or falling out. Molecube is an eco compatible design project due to the limited components and production process required.

THE LOOK IS FOR THOSE WHO DARE.

since 1985
