

VANNI

MADE IN ITALY, FOR SURE.

The VANNI Combi
VANNI combinations of metal and
acetate have never been this close

A classy comeback for a collection that combines our VANNI acetate block with ultra-thin crafted steel. A perfect and harmonious fusion of the two materials thanks to new innovative manufacturing techniques.

Raw Material:

VANNI acetate from the WIRED and RASTER exclusive acetate block, combined with steel sheet.

Design Detail:

the Combi VANNI model is the perfect mix of metal and acetate. The ultra-thin metal frame and temples are overlaid with acetate rims attached to the frontal frame by an almost invisible wire.

Shapes and Colours:

the Combi models have 4 shapes, more female in their design and construction. Dominating tones reflect season trends of blue, red, brown and turquoise.

VANNI eyewear is made in Italy, for sure.
