

VANNI

MADE IN ITALY, FOR SURE.

VANNI RE-MASTER

a new collection of eyewear that reinvents the masterpieces of the past

Frames in metal and acetate that revisit the classics of eyewear design. Iconic shapes, evergreen colours and styles that have dictated the changing look of fashion in previous decades and brought back to life with contemporary materials and finishes. As in the music and film industry, VANNI is remastering an ideal modern version of the timeless classic.

Raw Materials

multi-layer acetates in different tonalities and metals; steel veneers and engraved bronzes.

Design Detail

the rounded classic metal frame is revisited in an original and compact version, where delicate engraving and contrasting colour variations combine to differentiate the rim, bridge and lug. Other models repropose the brow bar with suspended lenses. The acetate models show off rounded rims with sculpted multi-layer acetate block.

Shapes and Colours

a revival of classic shapes, butterfly, rectangular or masculine. The acetates combine an original mix of Havana and the transparent. The metal frames are dominated by sombre tones and block colour that emphasize the shapes of the eyes, accompanied by galvanized gold, bronze and palladium.

VANNI eyewear is made in Italy, for sure.
