

VANNI

MADE IN ITALY, FOR SURE.

VANNI SURF-ING
a myriad of colourful
metal surface finishes

Metal glasses are making a comeback in the optical world: light, comfortable and loved by many. Although previous market offerings have not been particularly imaginative, VANNI has continuously experimented with new ways of working in stainless steel and bronze. With Surf-ing VANNI makes metal shine. The new surface finishes are at the cutting edge of research and design development of the Italian brand. The courage to experiment with an eclectic mix of elements not normally used in eyewear design. The payoff: Surf-ing.

Raw Materials

lightweight laminated steel and engraved bronze.

Design Detail

this season's theme is streaking, created by delicate horizontal lines in the tone on tone metal veneers. The temples are ultra-thin in stainless steel.

Shapes and Colours

Surf-ing is a unisex collection with a range of feminine and masculine shapes. Relatively sombre colours, darker streaking over a paler base with tones of violet and red, turquoise and blue, beige and taupe as well as grey, black, midnight blue and brown.

VANNI eyewear is made in Italy, for sure.
