

VANNI

MADE IN ITALY, FOR SURE.

VANNI TMT

VANNI presents the thinnest acetate eyewear in the world

“TMT - thin milling technology”: 30% thinner than any other acetate glasses ever made, VANNI’s new ultra thin models are the result of the research and development of new materials and innovative manufacturing techniques.

Raw Material:

new exclusive acetates created by the VANNI design team: Pixel, Colours, Raster and Wired.

Design Detail:

the new frames are feather-weight at only 16gr. and just 2.0 mm thick (versus the current minimum of 3.0 mm). Even the temple cores in stainless steel are super flat and thin to guarantee maximum comfort and flexibility. This technique has been branded “TMT”- thin milling technology” obtained by the latest sophisticated and high tech precision machinery.

Shapes and Colours:

TMT generates the Pixel, Colours, Raster and Wired acetates in classic shapes and different colour variations with the benefit of being exclusively ultra-light and ultra-thin.

VANNI eyewear is made in Italy, for sure.
